

GETTING STARTED

AC-2000 Series

Colposcope

Prepare for installation, learn the controls and organise the documentation for your AC-2000 Series.

Preparation guide · 14 September 2026

A preparation guide for trained healthcare teams. Use the operating instructions supplied for your unit and complete the appropriate training before clinical use.

01 Match the manual to the unit

Check the AC-2000 model and stand type, and ask Alltion Australia for the operating manual that matches the delivered configuration.

02 Arrange installation and checks

Review the installation section of your operating manual and the assembly video with your supplier. Have the stand, connections and movement checked before operator training.

03 Adjust the viewing system

Your operating manual covers binocular spacing, diopter adjustment and focusing. Practise those adjustments on a fixed non-clinical target during handover and record your eyepiece settings.

04 Confirm image capture if fitted

If your unit has a camera or capture software, identify the version and request its matching instructions. Complete a test capture and export before clinical use.
