

GETTING STARTED

ALL-CAM2

Full HD Video / Photo Camera for Microscopes

Prepare for installation, learn the controls and organise the documentation for your ALL-CAM2.

Preparation guide · 14 September 2026

A preparation guide for trained healthcare teams. Use the operating instructions supplied for your unit and complete the appropriate training before clinical use.

01 Match camera and microscope

Check the ALL-CAM2 interface, optical adapter, power supply and display with your supplier. Confirm which controls and accessories are included in the delivered system.

02 Review the assembly resource

Use the manufacturer assembly video before the supplier handover. Have the camera mounting, cabling and display connection checked on the assembled microscope.

03 Learn capture and white balance

During training, follow the power-on, white-balance and capture videos with your supplier. Make a non-clinical test image and recording, then check playback.

04 Confirm file handling

Use the export video to understand file transfer for your configuration. Keep the camera operating instructions and confirm your practice storage, access and backup arrangements.
