

GETTING STARTED

ANGEL 100

Operating Dental Microscope

Prepare for installation, learn the controls and organise the documentation for your ANGEL 100.

Preparation guide · 14 September 2026

A preparation guide for trained healthcare teams. Use the operating instructions supplied for your unit and complete the appropriate training before clinical use.

- 01 Confirm your configuration**

Record the serial number, objective, camera, stand and supplied accessories. Confirm the electromagnetic-lock configuration and any optional assistant scope with your supplier.
- 02 Arrange assembly and handover**

Watch the ANGEL 100 product demonstration to prepare questions for your handover. Have the supplier demonstrate the optical assembly, arm balance, locks and cable routing on the delivered unit.
- 03 Get familiar with the controls**

Ask for a demonstration of focus, zoom, illumination, handle controls and the wireless foot pedal. Identify the functions fitted to your particular configuration.
- 04 Check the imaging workflow**

During training, practise a test photo and video, then review where the files are stored and how they are exported. Keep the unit-specific instructions with the equipment.

Your Reference Material
